This book constitutes the proceedings of the first international conference on principles and practice of constraint programming CP 95 held in Cassis near Marseille France in September 1995. The 33 refereed full papers included were selected out of 108 submissions and constitute the main part of the book. In addition there is a 60 page documentation of the four invited papers and a section presenting industrial reports. Thus besides having a very strong research component the volume will be attractive for practitioners. The papers are organized in sections on efficient constraint handling, constraint logic programming, concurrent constraint programming, computational logic applications and operations research.

Nature inspired algorithms have been gaining much popularity in recent years due to the fact that many real world optimisation problems have become increasingly large, complex and dynamic. The size and complexity of the problems nowadays require the development of methods and solutions whose efficiency is measured by their ability to find acceptable results within a reasonable amount of time rather than an ability to guarantee the optimal solution. This volume Nature Inspired Algorithms for Optimisation is a collection of the latest state of the art algorithms and important studies for tackling various kinds of optimisation problems. It comprises 18 chapters including two introductory chapters which address the fundamental issues that have made optimisation problems difficult to solve and explain the rationale for seeking inspiration from nature. The contributions stand out through their novelty and clarity of the algorithmic descriptions and analyses and lead the way to interesting and varied new applications.
