reflect any changes in the business or the surrounding environment

### 2 Risk Assessment

A thorough assessment of potential pest risks including the types of pests likely to be present and their potential entry points is essential. The assessment should identify vulnerable areas and prioritize control measures accordingly.

### Integrated Pest Management (IPM)

The BRC encourages the adoption of IPM principles which prioritize preventive measures and nonchemical control methods whenever possible. This approach aims to minimize the use of pesticides and mitigate any potential risks to food and the environment.

### Effective Control Measures

The program should clearly define the specific control measures to be implemented including:

- Exclusion:** Physical barriers to prevent pest entry such as screens, door sweeps and sealing cracks and holes.
- Sanitation:** Maintaining a clean and tidy environment to eliminate food sources and attractants for pests.
- Monitoring:** Regular inspections to identify signs of pest activity and assess the effectiveness of control measures.
- Treatment:** Implementing appropriate treatments for identified pest infestations using licensed pest control operators and following all relevant regulations.

### 2 Documentation and Records

#### Pest Control Operator

All records related to the pest control program must be readily available and accessible for auditors. These records should include:

- Operator Credentials:** Proof of licensing, certifications and qualifications of the pest control operator.
- Treatment Logs:** Detailed records of all pest treatments including date, location, type of treatment and product used.
- Inspection Reports:** Documentation of regular inspections noting any signs of pest activity and the actions taken.
- Pest Activity Reports:** Records of any pest sightings including the date, location and the number of pests observed.
- Calibration Data:** Information regarding the calibration and maintenance of pest control equipment.

### 3 Training and Awareness

#### Personnel Training

All staff members involved in food production, handling or storage must be adequately trained in pest control practices. This training should cover topics such as:

- Pest Identification:** Recognizing common pests and their potential risks.
- Good Hygiene Practices:** Maintaining clean and sanitary work areas to minimize pest attractants.
- Reporting Procedures:** Knowing how to report suspected pest activity promptly and appropriately.

#### Awareness Campaigns

Continuous awareness programs should be

implemented to reinforce good pest control practices and encourage staff participation in the program

#### 4 Audits and Reviews

**Internal Audits** Regular internal audits are crucial to ensure the pest control program remains effective and meets the BRC requirements

**External Audits** The BRC certification requires periodic audits by accredited certification bodies. These audits assess the effectiveness of the pest control program, the accuracy of records and overall compliance with the standards

**Conclusion** A robust pest control program is not a mere formality; it's a fundamental pillar of food safety and a key component of a successful BRC audit. By adopting a preventative approach, ensuring comprehensive documentation, and promoting a culture of awareness, food businesses can create a safe and hygienic environment, protecting consumers and upholding the highest standards of quality. The importance of proactive measures, thorough documentation, and ongoing vigilance cannot be overstated. A commitment to excellence in pest control is a commitment to food safety, consumer trust, and business success.

#### FAQs

- 1 What are the most common pests encountered in food facilities? Common pests include rodents, insects (e.g., cockroaches, flies, ants), birds, and other wildlife. The specific pests present will vary depending on the location, the type of food business, and the surrounding environment.
- 2 How often should pest inspections be conducted? The frequency of inspections should be determined by a risk assessment and consider factors such as the type of business, the surrounding environment, and the history of pest activity. Generally, inspections should be conducted at least monthly, but more frequent inspections may be necessary in high-risk areas or during periods of increased pest activity.
- 3 What types of pest control treatments are permitted under BRC guidelines? The BRC encourages the use of integrated pest management (IPM) principles, which prioritize nonchemical methods such as physical barriers, sanitation, and biological control. However, chemical treatments may be necessary in some cases. The type of treatment should be chosen based on the specific pest, the surrounding environment, and the potential risks to food and humans.
- 4 How can I effectively prevent pests from entering my facility? Effective exclusion methods include sealing cracks and holes, installing screens on doors and windows, using door sweeps, and maintaining a clean and tidy exterior.

environment Regular inspections of the facility's perimeter and any potential entry points are essential for identifying and addressing vulnerabilities 5 What happens if my facility fails a BRC audit due to pest control deficiencies Failing an audit can result in the suspension or withdrawal of BRC certification This can have significant consequences for the business including loss of customer trust reputational damage and potential legal liabilities It is essential to address all audit findings promptly and implement corrective actions to ensure future compliance
