This book presents the fundamental concepts of biology and develops students' critical thinking skills to apply these concepts. It introduces the procedures of hypothesis formation, prediction, experimental design, and interpretation as the essential parts of scientific investigation. It covers cell theory and focuses on energy as well as the catalytic action of enzymes and diffusion across cell membranes. It covers the major physiological systems in organisms. Primary emphasis is placed on the application of basic concepts such as diffusion, osmosis, energy capture and release, and the action of enzymes. This book includes molecular biology and population genetics as well as cell division and Mendelian inheritance. It finally covers the mechanisms of selection and speciation as well as the long-range implications of evolution.

Neil Campbell and Jane Reece's *Biology* remains unsurpassed as the most successful major biology textbook in the world. This text has invited more than 4 million students into the study of this dynamic and essential discipline. The authors have restructured each chapter around a conceptual framework of five or six big ideas. An overview draws students in and sets the stage for the rest of the chapter. Each numbered concept head announces the beginning of a new concept, and concept check questions at the end of each chapter encourage students to assess their mastery of a given concept. New inquiry figures focus students on the experimental process, and new research method figures illustrate important techniques in biology. Each chapter ends with a scientific inquiry question that asks students to apply scientific investigation skills to the content of the chapter.
