a new empathic approach to design research drawn from the informed experiences of a leading design research program in finland design empathy interpretation tells the story of empathic design a design research program at aalto university in helsinki finland that has developed an interpretive approach to design over the past twenty years as one of the leaders of the helsinki group ilpo koskinen draws on his own experiences to offer readers a general intellectual and professional history of design research and argues for what he calls an interpretive approach design empathy interpretation shows how the group has created connections all across the globe and how a seemingly soft approach to design research can be useful in both industry and government koskinen follows design research s transformation from questions of usability in the 1980s through to the revolution in personal electronics and the user centered turn of the 1990s using the research community in helsinki as a case study and moving between specific projects and theoretical debates he offers readers a focused introduction to the major methodological and intellectual challenges as well as the opportunities of design research he argues that all design tasks however simple or complex begin with understanding the way humans ascribe meaning both as individuals and as actors in complex societies thus all design research must be interpretive at its core a new empathic approach to design research drawn from the informed experiences of a leading design research program in finland

when you walk into a dimly lit atmospheric room in a classic 3d video game the shadows gathering in the corners and under the furniture look incredibly realistic you assume the game console is calculating the complex behavior of light bouncing around the room in

reality the console is doing absolutely nothing the shadows are completely fake calculating real time light bounces requires immense processing power that early hardware simply did not possess to create the illusion of depth developers utilized baked ambient occlusion this ingenious technique involves having powerful studio computers calculate the lighting physics months before the game is released the developers then literally paint those pre calculated shadows directly onto the 2d texture wallpaper of the 3d objects this technical analysis explores the smoke and mirrors of digital rendering we dissect how programmers tricked the human eye into perceiving complex geometry and lighting without forcing the player s hardware to spend a single megabyte of ram unmask the illusions of digital worlds learn how the smartest engineers solved impossible physics problems with the digital equivalent of a paintbrush
